Executive Summary

This Power BI solution delivers an executive view of healthcare revenue cycle performance by consolidating billed revenue, collections, accounts receivable, insurance mix, and claims activity into a single interactive reporting environment. Through KPI monitoring, trend analysis, conditional formatting, and drill-through reporting, leaders can identify financial risks, accelerate claim investigations, and support data-driven revenue optimization.

Business Problem

Revenue cycle performance directly impacts the financial health of healthcare organizations, yet billing, collections, and claims data are often fragmented across multiple reports. This limits executive visibility and slows timely financial decision-making.

Project Objectives

- Centralize executive revenue cycle KPIs
- Monitor billed revenue, collections, and outstanding balances
- Evaluate insurance performance
- Analyze claim status trends
- Enable drill-through investigation of individual claims

Tools & Technologies

Power BI • Power Query • DAX • Microsoft Excel

Data Preparation

Revenue cycle data was validated, transformed, and modeled to support accurate KPI reporting. Calculated measures, interactive slicers, conditional formatting, and drill-through functionality were implemented to improve analysis.

Dashboard Highlights

Executive KPI reporting, revenue trend analysis, insurance mix comparison, claims status monitoring, interactive filtering, conditional formatting, and claim-level drill-through reporting.

Key Insights

The dashboard provides immediate visibility into collection performance, outstanding accounts receivable, insurance mix, and claims processing. Consolidating these metrics into one reporting solution reduces reporting complexity and supports faster financial decisions.

Business Recommendations

Prioritize high-value outstanding claims, monitor payer-specific performance, incorporate KPI reviews into financial meetings, and use drill-through reporting to accelerate claim resolution.

Skills Demonstrated

Dashboard Development • Executive Reporting • Revenue Cycle Analytics • Business Intelligence • Data Visualization • Power BI • DAX

Reflection

This project strengthened my ability to transform complex revenue cycle data into executive business intelligence that supports financial performance, operational efficiency, and strategic decision-making.
